5 to 10 kg	2	5 to 10 kg	1
11 to 22 kg	4	11 to 22 kg	2
23 to 44 kg	6	23 to 44 kg	4
Over 45 kg	8	Over 45 kg	6

ATTENTION: DOG OWNERS!

Has your dog stopped jumping up on the bed or sofa, or other favourite furniture?

If your dog, like my Eddie, is slowing down and just can't run and jump like he used to...

here's good news for you and your dog!

Dear Fellow Dog Lover,

Hi, I'm Stephanie Margetts, Marketing Manager at Australian NaturalCare. I don't often write personal letters to our customers, but today I wanted to share a story that is personal to me – or, I should say, to my dog, Eddie.

Eddie (that's him, right) is a pound dog. A few years ago, we decided our house needed a dog, so we went to the local pound and – well, you know how it works. A little face looks up... a cold nose nudges you... a warm tongue licks your hand... and all of a sudden you have a new member of the family.

Eddie is a Shih Tzu cross. He must be about eight years old now, and he's been a handful and a delight ever since we brought him home.

A year or so ago, we noticed he was slowing down. Nothing major, just moving slower, running less. He just didn't seem to enjoy his walks as much as before. Then, a few months ago, we noticed that he was finding it harder to jump up on the bed... his favourite spot. That's when we suspected that eight years or so had started to take its toll on his bones and joints.

So, we made an appointment with his vet to see what he could do. The vet diagnosed arthritis and recommended we give supplements a try before resorting to conventional, and expensive treatments, like cortisone injections.

Fortunately I work for a nutritional supplement company! So using what I already know about what works in humans, I started “sniffing” around (pardon the pun) into what has been proven to help canine arthritis and went searching for a supplement that would help relieve Eddie's pain.

What I found surprised and disappointed me

Many of the supplements on the market have what looks like the right ingredients – but when you take a closer look at the formula many don't include enough of those ingredients to really make a difference.

And an even bigger issue was – Eddie simply wouldn't take them. He turned his nose up at them and couldn't seem to get the hang of the so-called chewable tablets. Now, Eddie may be small and fluffy but he likes to eat just about anything – so the tablets must have been really unappetising! And as for powders, they needed to be

measured and mixed and just weren't convenient – especially if you sometimes feed your dog dry food. Giving him a joint tablet became like trying to give him any other medicine he didn't like. As a dog owner, you know exactly what I mean. That's no fun for you or your dog!

Then I discovered **Joint Guard Liver Treats**.

Now he literally begs for his joint treat!

When I looked at the formula, I was pretty sure it was a good bet. It contains ingredients clinically proven to work in dogs – and in all the right amounts. And best of all, it's in the form of a **soft chewy liver treat** – not a hard tablet or dry powder.

So, I bought a pack and started giving it to Eddie. He loved it – and I mean, LOVED it. Now every evening after his dinner he's right there at my feet, waiting for his Joint Guard liver treat! In fact, as far as he's concerned, it's just as good as any dog bone or treat I've ever given him!

One night – maybe six weeks or so after he started taking it – we heard a familiar snore. Eddie had hopped back up on the bed and snuggled in just like old times! We've also noticed other improvements. He seems to find it easier to walk for longer in the park – and doesn't seem to be so careful about getting in and out of the car.

The same ingredients that work so well for people – but in a dog-friendly form!

As I said, when I looked at the formula for **Joint Guard Liver Treats**, I wasn't surprised it worked so well. It has the same ingredients that relieve arthritis pain in humans – but in clinically proven, dog-sized proportions – and in an irresistible-to-canines soft and chewy liver treat!

I am sure these ingredients will be familiar to you, as they're found in Australian NaturalCare's best “people” joint formulas as well:

Chondroitin Sulfate – supports the proper structure, function and health of connective tissues and joints in dogs and cats. It also blocks the enzymes that break down cartilage.

Glucosamine hydrochloride – a key nutrient that acts as a building block for cartilage to help reconstruct damaged joints. It promotes the synthesis of glycosaminoglycans (GAG's) which help keep joints lubricated and promote flexibility.

Methylsulfonylmethane (MSM) – Reduces inflammation and helps maintain proper connective tissue function, joint flexibility, and everyday comfort.

Joint Guard Liver Treats also contains **Manganese, Vitamin C, Zinc, Copper and Vitamin E** – all of which are important nutritional building blocks that dogs need to support and maintain healthy joint and connective tissue.

How long will it take to see a difference?

Joint Guard Liver Treats is a clinically proven natural alternative that over time helps support and regenerate the cartilage and cushioning material in your dog's joints. It is not a quick fix that promises instant (but superficial) results. Just as with arthritis supplements for humans, the glucosamine, chondroitin sulfate and MSM need time to go to work regenerating those joints. It may take between one to three months before you start to notice a difference in your dog's mobility. For some dogs it may happen much sooner.

What are the signs of osteoarthritis in dogs?

1. Does your dog seem to be moving more slowly, or tiring quickly on walks?
2. Is your dog reluctant to rise, or climb stairs?
3. Do you own a breed that is known for joint and hip problems?
4. Has your dog stopped jumping up on the bed or sofa, or other favourite furniture?
5. Has your dog been diagnosed with arthritis?

If you've answered “YES” to any of these questions, Joint Guard Liver Treats could help relieve the pain and inflammation and give your dog back the comfort and mobility of a younger dog.

Find out for yourself: Try Joint Guard Liver Treats Risk-Free!

You may already be giving your dog a joint support product – but how well is it working? Can you see the difference? Is your dog still able to jump up on the bed or couch with ease? Does he sit there patiently waiting for his joint tablet after his dinner?

If the answer is no, please try **Joint Guard Liver Treats**. You'll be amazed as I was at how much easier it is to give your dog something that's so good for him! There's no risk. If by any chance your dog doesn't love the taste (very unlikely!) – or if you're unhappy with the quality of the product – then you can send the pack back to us for a no-questions-asked refund of your purchase price (less the delivery charge).

Order your risk-free supply of **Joint Guard Liver Treats** today and see how you can make one of the most important members of your family more comfortable, flexible, and able to jump into your lap for years to come!

Yours sincerely

Stephanie Margetts
